Loan Value at Risk

\$77.1M

24.7% of Loan Value at risk

loan_grade and their default rate

Risk jumps sharply from Grade C (20.7%) to Grade D (59.0%), the ladder isn't linear.

Default Rates by State

Default Rate holds within a tight 20.9%-22.5% across states. Geography isn't a risk driver.

Default Rate by loan_intent

Those who borrow for debt consolidation tend to default more

Non-Default Rate

Loan value at risk by Employment_type

Full-time carries the most value at risk (\$45.3M)

Which loan grade has the avg int.rate?

Homeowners Default rate

11.7%

31.6% Renters Default Rate

Does home ownership have effect on the default rate or the % of loan at risk?

Renters default at 4x the rate of outright homeowners, likely reflecting equity cushion, not tenure itself.

● Pct Loan Value at Risk ● Default Rate

Does default rate & prior default rate have anything to do with gender?

There's no meaningful gender-based difference

Risk Segments by Default rate

Default Rate and Loan Value at Risk by person_income

Is there a correlation btw a person's income and default rate? No relationship, high earners default too. Affordability ratios (DTI/LTI), not income level, drive risk.

Riskiest Cities

Default rate stays within a tight 20–24% band across every city, Vancouver is highest at 24.2%, but no single location stands out as an outlier. Location isn't a meaningful risk driver on its own; grade and affordability are.

city	Total Applications	Default Rate
Vancouver	1,827	24.2%
Dallas	1,797	23.6%
Edinburgh	1,807	23.5%
Los Angeles	1,838	22.9%
Manchester	1,803	22.5%
Toronto	1,751	22.0%
Montreal	1,799	21.9%
San Francisco	1,841	21.8%
Ottawa	1,802	21.8%
Glasgow	1,841	21.6%
New York City	1,769	21.4%
Cardiff	1,831	21.3%
London	1,851	21.1%

Where is loan value at risk concentrated?

Singles carries the largest share, but withing any group, its segment that drives the risk not marital status.

Who are the most defaulters?

Highest at 24.5% (Unemployed, high school-educated), but only marginally above other groups
